

Year 8/9 Science & Technology Challenge Day: Bolton University

Many thanks to Bolton University for inviting Smithills school to take part in their Science & Technology challenge day on Thursday 9th June 2016.

Students had a fabulous time taking part in three challenges including an E-Fit, vehicle & robot challenge. Students were asked to work as a team with students from other schools across Bolton to complete challenges where they were marked on planning, teamwork and their final product.

Students were expected to 'think outside the box' and were able to use many transferable skills including, cooperation, creativity, decision making, problem solving and communication skills.

Smithills had two students awarded an overall prize for consistent across all three challenges so special congratulations go to Qasim Arif and Bareena Arif. The whole group of students who took part in this event, made an excellent contribution in the team tasks and had an awesome day meeting and working with other students with a passion for science & technology. Well done to you all!
